The unique TITE-REACH™ is a professional hand tool that will make your job easier by dealing with those hard to reach nuts and bolts! The TITE-REACH™ needs ZERO degrees of swing angle in order to operate. Tightening and unscrewing bolts can now be done in a fraction of the time!

The TITE-REACH™ was designed to extend out from the nut/bolt allowing the 3/8" or 1/4" drive a greater degree of swing angle and therefore a faster way to tighten and loosen in those hard to reach areas. All you need is your existing 3/8" or 1/4" drive and socket set and you are ready to use the TITE-REACH™!

The aluminum housing, chrome hardened gears and UHMW bushings are built to withstand even the toughest jobs... and you can even use the TITE-REACH™ to turn those nuts and bolts that have not been touched in years!

TITE-REACH™ is a patented product of TR Tools LLC - USA
US patent D 607,289, other patents pending
